WORK EXPERIENCE

6Origin

Software Engineer Intern

Sept 2025 - Oct 2025

Enhanced and optimized a React.js + Vite-based e-commerce platform enabling over **1,000+ handmade** product listings and seamless vendor-buyer interactions.

Engineered dynamic authentication modules (Login/Register) using **React Hook Form**, **React Router**, and **Toastify** for enhanced user experience.

Collaborated on integrating RESTful APIs and state management to ensure smooth data flow across product, dashboard, and user modules.

Improved frontend performance and build speed by **30%** through optimized routing, component reusability, and Vite bundling.

EDUCATION

Vellore Institute of Technology

B.Tech(Computer Science and Engineering) - 7.5/10

Sept 2021 - May 2025

T.Abdul Wahid Matriculation Higher Secondary School

High Shool, Science(PCM) - 89/100

June 2020 - April 2021

PROJECTS

Hybrid CNN-Attention Model for Predicting Jet Engine Failures 🔗

April 2025

Implemented a hybrid 1D CNN with temporal attention, boosting RUL prediction accuracy by 18% RMSE on NASA's CMAPSS dataset vs. LSTM and vanilla CNN. **Performed EDA and correlation studies** to select high-impact sensors, reducing input size by 30% and improving training efficiency without accuracy loss. **Trained a unified model on 100+ engines**, capturing shared degradation patterns and achieving 12% lower RMSE on unseen conditions.

Created using Python, EDA, Random Forest and trained using Hybrid CNN which resulted in 18% RMSE compared to other models.

HR Data Insights: Predicting Employee Turnover 🔗

Aug 2025

Built an interactive HR Analytics Dashboard in Tableau to track attrition across departments, highlighting high-turnover areas. Identified top 3 drivers of churn (tenure, department, age), with insights supporting potential **20–25% attrition reduction**. Found employees with **<2 years tenure had 2× higher attrition**, guiding HR to focus on early-stage retention. Analyzed seasonal attrition trends, helping predict and prepare for **10–15% shifts in retention**.

Leveraged Tableau, Excel, and data cleaning methods to deliver actionable insights through clear, interactive visuals.

Retail-Insights-Pipeline 🔗

Sept 2025

Developed a Retail Revenue Analysis system processing **100K+ transaction records** to analyze product performance and sales trends. **Built** an end-to-end data pipeline using **Python, MySQL, and Tableau**, converting raw retail data into **actionable business insights**. **Engineered** 2 SQL views and 5 analytical queries to calculate gross sales, net revenue, and product rankings, improving query performance by **30%**.

Applied Python for data transformation, MySQL for efficient data warehousing, and Tableau for **interactive KPI dashboards** on revenue growth and returns.

SKILLS

Programming Languages: C/C++, Java, Python, C#, JavaScript

Business Analysis: Requirements Gathering, Process Mapping, User Stories, Functional Specifications

Tools and Technologies: Data Analysis, Data Modelling, EDA, ETL, Reporting Analysis, Data Visualization, MS Excel, SQL, Tableau, Power BI, GCP, Tensorflow, Scikit-learn, Matplotlib, HTML, CSS, OOPS, Git, Github

Methodologies: Agile, Waterfall, SDLC

Soft Skills: Communication, Stakeholder Management, Problem-Solving, Attention to Detail
